OPERATING INSTRUCTIONS

The 4.0mm & 6.0mm nozzles are suitable for medium viscosity materials. The 8.0mm nozzle is suitable for high viscosity materials. The size of drop is controlled by means of the air regulator which can be fitted in the air inlet on the gun body. The spray gun is an internal mix type with material gravity feed from the hopper. This gun requires a minimum of an 8 mm hose line. Maximum hopper capacity is 5.5 Litres. Use with masonry, textured paints & textile wall coatings on medium sized surfaces.
